

CYCLE #01 · PIPELINE BRIEFING · 2026-09-01

6 candidates for review

Colin — the companies below have signaled active awareness spending in the last 30 to 60 days: recent IR firm engagements, marketing or agency retainers, paid media placements, or fresh financing tied to a narrative moment. Each is scored against PRmediaNow's calibrated ICP and paired with a suggested outreach angle in PRmediaNow's voice.

1. Helium Evolution Incorporated TSXV: HEVI SCORE 9 / 10

Helium exploration & production · Southern Saskatchewan

INTENT SIGNAL

August 25, 2026 — closed \$25M non-brokered private placement (166.6M units @ \$0.15/unit). International strategic investors subscribed for \$23.7M of the round. Extension of price protection granted August 20 to accommodate the international demand. [Source](#)

STORY HOOK

\$25M raised from international investors during the current helium supply squeeze — this is the largest fresh capital event in the Canadian helium space right now, and the international shareholder base is a natural media story on its own.

SUGGESTED ANGLE

Saw the \$25M close on August 25 — the international shareholder base and the helium supply-squeeze narrative are a broadcast and trade media story that hasn't been told yet. Worth 15 minutes to walk through what national coverage plus a Cyndi Edwards CEO interview would layer on top of the fresh capital.

2. Krait Critical Minerals Corp. CSE: KRIT SCORE 8 / 10

Critical minerals exploration (rare earths + PGE) · Ontario (Goldbar Spider Lake Project)

INTENT SIGNAL

August 24, 2026 — CSE listing approval granted, trading commences as KRIT. Simultaneously engaged Independent Trading Group (ITG) for market-making and Mining Investor Resources Media (MiningIR) for a 12-month investor awareness campaign (\$48,000 total, ending August 14, 2027). [Source](#)

STORY HOOK

Fresh CSE listing + Ontario critical-minerals story right when Canadian critical-minerals policy is at its most active. MiningIR handles digital; the earned-media layer is wide open.

SUGGESTED ANGLE

Just listed on the CSE on August 24 with MiningIR handling digital awareness — the next layer is broadcast and trade media on the Ontario critical-minerals story. Ottawa's critical-minerals push is at its peak; a fresh CSE listing with rare-earth exposure has a national narrative window. Fifteen minutes to walk through what earned media adds on top of MiningIR?

3. Canadian Uranium Corp. CSE: CANU SCORE 8 / 10

Uranium exploration (nuclear / clean energy) · Athabasca Basin, Saskatchewan (Beaverlodge district)

INTENT SIGNAL

August 28, 2026 — announced 100% acquisition of the Clark Lake Property in the historic Beaverlodge district of the Athabasca Basin (past-producing uranium mines in the area). Simultaneously engaged Gold Standard Media for a 60-day IR and capital markets services engagement starting December 1, 2026. [Source](#)

STORY HOOK

Beaverlodge acquisition + AI-driven nuclear demand narrative + fresh IR engagement scheduled for Dec 1 — the window between now and the IR launch is the perfect earned-media set-up for broadcast trade press.

SUGGESTED ANGLE

The Clark Lake acquisition in Beaverlodge lands right when AI demand is lifting nuclear across the board — that's a story. Gold Standard Media takes over IR on December 1; the eight weeks before then are the earned-media window that would front-load their story on broadcast and trade. Fifteen minutes to walk through what PRmediaNow lines up before the IR launch?

4. Coniagas Battery Metals Inc. TSXV: COS SCORE 8 / 10

Battery metals (nickel, copper, cobalt, PGE) · Québec

INTENT SIGNAL

August 18, 2026 — entered a services agreement with Proactive Group Holdings for investor awareness and communications services. Proactive Group placements are paid — the signal is that Coniagas is actively spending on awareness in the battery-metals capital markets right now. [Source](#)

STORY HOOK

Québec nickel + PGE story at a moment when North American battery supply chain is a national policy story. Proactive Group is running the digital side; broadcast and trade are wide open.

SUGGESTED ANGLE

Coniagas is spending on Proactive Group for the digital awareness layer — the earned-media layer above it is where the Québec battery-supply-chain story becomes national coverage. Fifteen minutes to walk through what PRmediaNow adds on top of the paid channel?

5. UraniumX Discovery Corp. OTCQB: STMXF SCORE 7 / 10

Uranium exploration (nuclear / clean energy) · Athabasca Basin, Saskatchewan

INTENT SIGNAL

August 20-21, 2026 — deployed \$3.8M into Athabasca Basin exploration program alongside Athabasca Uranium Juniors push. Company is in active spending mode with drilling underway during the current nuclear-demand surge lifting the whole basin.

[Source](#)

STORY HOOK

\$3.8M drill campaign in the middle of the AI-nuclear demand surge — the basin-wide narrative rising tide plus company-specific news creates a broadcast-fit story arc.

SUGGESTED ANGLE

The \$3.8M deployment lands right as the AI-nuclear demand story is peaking across the Athabasca Basin. This is the type of catalyst-plus-macro moment that broadcast and trade media pick up — worth fifteen minutes to walk through PRmediaNow's angle.

6. Surge Battery Metals Inc. TSXV: NILI SCORE 7 / 10

Lithium (battery materials) · Nevada North Lithium Project (US assets, Canadian-listed)

INTENT SIGNAL

July 2026 — entered an investor relations and marketing agreement with New Era Publishing (Katusa Research), on top of a February 2026 marketing agreement with Freedom Financial Research. Multi-vendor awareness push signals active spend right now. [Source](#)

STORY HOOK

US-asset story with Canadian listing at a moment when domestic lithium supply is a national policy question. Katusa audience is retail-heavy; broadcast media reaches a different pool.

SUGGESTED ANGLE

Katusa Research is running the retail-investor awareness side. The next layer is broadcast and trade media on the domestic-lithium-supply narrative — different audience, different story arc. Fifteen minutes to see if PRmediaNow fits alongside the Katusa program?

Which of these you engage — and how it goes — is your call. When a lead moves forward, gets set aside, or comes back to life later, a quick note back sharpens the engine for the next cycle. No formal reply is required; the decision on whether to reach out sits with you.
