

PRmediaNow Engagement Diagnostic

What gets built for PRmediaNow — the six possible components, what each covers, and which apply to PRmediaNow specifically.

How to read this

TridentRise builds revenue infrastructure across six components. This document maps each component to PRmediaNow's situation and describes what each delivers for PRmediaNow specifically.

The result is the scope of PRmediaNow's Initial Build. Investment information for each stage is documented separately in the Service Model & Investment reference.

Component 1 — ICP & Market Mapping

Status for PRmediaNow: Critical (in scope)

A defined picture of who the right buyers are, why they buy, and what triggers an opening.

For PRmediaNow: The calibrated ICP is built and lives in this hub. It is tuned to PRmediaNow's practice focus — junior mining and microcap public companies across AI infrastructure, rare earths and critical minerals, natural hydrogen, nuclear and clean energy, space and aerospace, defense supply chains, battery materials, and cybersecurity.

Component 2 — CRM Implementation

Status for PRmediaNow: To be decided

A working system where every lead, conversation, and deal lives — not in inboxes, not in heads, not in three different places.

For PRmediaNow: PRmediaNow does not currently have a dedicated CRM. Once the engine starts surfacing leads on cadence, a CRM will likely be needed to track each opportunity through to close. The choice and timing remain with PRmediaNow. If a recommendation is helpful, **Pipedrive** is well-suited to this workflow. Whichever system is selected, TridentRise can configure pipeline stages, custom fields tied to the engine output, and automation hooks for the one-word triage replies.

Component 3 — Outbound Lead-Gen Engine

Status for PRmediaNow: Critical (in scope) — headline deliverable

A repeatable system that surfaces high-fit, prepared leads on a cadence.

For PRmediaNow: The engine ingests intent signals from press release wires, broker-paid research feeds, exchange filings, and Proactive Investors features. AI-driven enrichment produces a complete dossier on each candidate company. The scoring rubric ranks every candidate against PRmediaNow's calibrated ICP. The result: **five ranked leads in a briefing email, delivered every other Monday morning** — roughly 10 candidates per month, calibrated to two-principal firm capacity. Each lead is paired with a suggested outreach angle in PRmediaNow's voice.

Volume and cadence are starting points, adjustable as PRmediaNow runs with the engine. Final settings depend on the balance between PRmediaNow's own outreach effort and TridentRise's role — both of which can be revisited.

How the briefing arrives: The briefing is sent as a regular email — from michael@tridentrise.com to whichever PRmediaNow address (or addresses) you specify. The engine does not access PRmediaNow's inbox. It simply sends an email to the recipients PRmediaNow designates. The recipient list can be added to, changed, or trimmed at any time.

Component 4 — Qualification Framework

Status for PRmediaNow: Important (in scope)

Rules for separating real opportunity from noise before selling time is spent.

For PRmediaNow: The qualification framework is the scoring rubric — ICP fit × Need × Reach × Timing — built directly into the engine. It is calibrated against PRmediaNow's existing engagement patterns during the build, then recalibrated continuously from the one-word triage feedback (CHASE / KILL / LATER) on each briefing.

Component 5 — Pipeline Visibility Dashboard

Status for PRmediaNow: Important (in scope)

A web view showing what the engine has produced, what has been chased, and what has won. Transparent, ongoing visibility.

For PRmediaNow: The PRmediaNow dashboard goes live at `prmn.tridentrise.com` during the build. It refreshes on the briefing cadence — every Monday, Wednesday, and Friday morning. No login or password required. The dashboard preview linked from this hub shows what the live version will look like.

Component 6 — Voice & Messaging Calibration

Status for PRmediaNow: Important (in scope)

AI-drafted outreach that sounds like PRmediaNow, not like a chatbot.

For PRmediaNow: PRmediaNow's voice samples are loaded into the engine during Week 1 of the build. The engine drafts the suggested angle for each lead using PRmediaNow's existing tone, anchored on the four standard PRmediaNow hooks — media coverage, Cyndi Edwards interview-format video content, multi-purpose content reuse, and investor-narrative arc.

Summary — PRmediaNow Initial Build scope

#	Component	Status
1	ICP & Market Mapping	Critical — in scope
2	CRM Implementation	To be decided
3	Outbound Lead-Gen Engine	Critical — headline deliverable
4	Qualification Framework	Important — in scope
5	Pipeline Visibility Dashboard	Important — in scope
6	Voice & Messaging Calibration	Important — in scope

Components 1, 3, 4, 5, and 6 are confirmed in scope for PRmediaNow's Initial Build. Component 2 (CRM) is a decision for PRmediaNow once lead flow begins.

For investment details and how the four service stages organize beyond the Initial Build, see the Service Model & Investment reference.

This scope can be adjusted at any time as priorities evolve.
