

PRmediaNow — Ideal Client Profile

The companies the PRMN engine is built to surface and engage.

Approach

This ICP was developed from a combination of TridentRise's research into PRMN's market, paired with direct input from PRMN. It is calibrated to PRMN's current practice focus and can be adjusted at any time as priorities evolve.

Sector mix

Junior mining and microcap public companies, weighted toward sectors where awareness spending is currently most active:

Tier	Sectors
Heavy weight	AI infrastructure · Rare earths and critical minerals · Natural hydrogen · Nuclear and clean energy
Strong	Space and aerospace · Defense supply chains · Battery materials
Adjacent	Cybersecurity

Out of scope

For the current engine configuration, these segments are excluded:

- **Crowdfunding** — current market dynamics do not support PRMN's typical engagement model
- **Cannabis** — sector volatility makes the placement economics unattractive

If priorities shift, the engine configuration can be re-tuned to include these segments.

Firmographic

- **Exchange:** Canadian listings (CSE, TSX-V, TSX) and US listings (OTC tiers, NYSE American, NASDAQ small-cap). Dual-listed Canada / US is the sweet spot.

- **Market cap band:** approximately C\$10M to C\$200M (US\$8M to US\$150M for US-only listings).
 - **Geography:** North America — Canadian and US-domiciled or asset-focused. Dual-listed and cross-border story candidates receive a slight scoring boost.
-

Intent signals (trigger events)

The signals the engine watches for, in order of strength:

1. **Recent IR firm engagement announcement** — the strongest single signal. Company has explicitly signaled it is spending on awareness.
 2. **Recent marketing or digital-agency engagement** — same pattern, different vendor category.
 3. **Recent paid YouTube segment appearance** — confirms an existing digital-marketing relationship and budget.
 4. **Recent broker-paid research initiation** — capital-markets storytelling investment.
 5. **Featured appearance on Proactive Investors or similar paid platforms** — confirmed awareness spend on a sponsored channel.
-

Need signals (separates "could fit" from "ready to buy")

- Most recent press release is an IR firm engagement notice
 - Recent video / interview appearances on Stockhouse, Investing News Network, or paid YouTube channels
 - Active broker-paid research coverage initiated
 - No PR firm visible in last 6 months of press release footers
 - Press cadence acceleration in last 90 days
-

Buyer persona

- **Primary decision-maker:** CEO. At microcap and small-cap scale, the CEO is the central voice and signs off on PR / IR engagements directly.
 - **Signs the check:** CFO. Engagement typically goes through CEO first.
 - **Common gatekeeper:** existing IR consultant. Where one is present, including them in early outreach often accelerates the conversation.
-

Why-now angles — the PR / IR levers PRMN brings

When the engine drafts a suggested outreach line for each lead, it builds the angle around one of four standard hooks:

1. **Media coverage** — trade publications, national and local broadcast
2. **Cyndi Edwards interview-format video** — interview-style owned content with the CEO, hosted by a former syndicated TV news host. PRMN's distinctive product differentiator.
3. **Multi-purpose content reuse** — media coverage and video content extended into newsletters, investor decks, and social posts
4. **Investor-narrative arc** — framing news for shareholders, not just for press

How this powers the engine

ICP element	Engine step it drives
Sector mix + market cap + exchange	Fit scoring
Intent triggers	Source filtering + timing scoring
Need signals	Need scoring — separates urgent from someday
Out-of-scope segments	Hard filter — veto before scoring
Buyer persona + why-now angles	Suggested-angle drafting in PRMN's voice

This ICP is a living document. It can be revised at any time as the engagement evolves, as new sectors emerge, or as PRMN's practice focus shifts.
