

CYCLE #02 · PIPELINE BRIEFING · 2026-09-22

6 candidates for review

Colin — the companies below have signaled active awareness spending in the last 30 to 60 days: recent IR firm engagements, marketing or agency retainers, paid media placements, or fresh financing tied to a narrative moment. Each is scored against PRmediaNow's calibrated ICP and paired with a suggested outreach angle in PRmediaNow's voice.

1. Nexcel Metals Corp. CSE: NEXX / OTCQB: NXXCF SCORE 9 / 10

Critical minerals exploration (tungsten + rare earths) · New Brunswick (Burnt Hill Tungsten-Mo-Sn) + Quebec (Lac Ducharme REE)

INTENT SIGNAL

September 18, 2026 — engaged Investor Insights Systems Inc. for a 3-month digital marketing campaign (\$250,000 USD upfront, option to extend another \$250,000, services starting September 21). Simultaneously engaged Independent Trading Group for market-making on the CSE. Two commercial-awareness engagements landing on the same day. [Source](#)

STORY HOOK

A quarter-million-dollar digital push plus a fresh CSE market-maker landing at the moment US critical-minerals policy is explicitly naming tungsten and rare earths as national-security supply. Two-signal stack, hitting on the same day.

SUGGESTED ANGLE

Nexcel just put \$250K down for digital marketing on top of a fresh market-maker engagement — the intent is unambiguous. Tungsten + rare earths sit at the sharpest edge of US critical-minerals policy right now, and the broadcast layer with Cyndi Edwards is a natural earned-media addition on top of the digital push. Fifteen minutes to walk through what PRmediaNow adds?

2. Power Metallic Mines Inc. TSXV: PNP / OTCQX: PPNF SCORE 9 / 10

Battery metals + PGE (Copper-PGE-Nickel-Gold-Silver polymetallic) · Eeyou Istchee James Bay, Quebec (Nisk-Lion-Tiger project area)

INTENT SIGNAL

September 1, 2026 — engaged Ora IR Services for investor relations at \$20,000/month for 6 months (extension option). Concurrent fall-winter conference schedule announced: Emerging Growth Conference (September 24), Precious Metals Summit Beaver Creek, Luxembourg Natural Resource, New Orleans Investment Conference, Mines and Money London — ~\$75,000 US total budget. 5 rigs turning at Nisk with summer assays expected. [Source](#)

STORY HOOK

IR engagement + five fall/winter conferences + five rigs turning with assays coming — a company spending real money to be visible at the exact moment its news flow peaks. Polymetallic Cu-PGE-Ni sits at the intersection of battery-metals and defense-supply-chain narratives.

SUGGESTED ANGLE

Power Metallic is spending across four conferences plus a monthly IR retainer plus imminent assays — the awareness stack is fully engaged. The polymetallic Cu-PGE-Ni story is one broadcast can carry as both a battery-supply-chain angle and a Canadian critical-minerals angle. Fifteen minutes to walk through where PRmediaNow slots into the fall push?

3. Norsemont Mining Inc. TSXV: NOM / OTC: NRRSF SCORE 8 / 10

Gold (junior mining) · Chile (Choquelimpie project) — Canadian-listed

INTENT SIGNAL

September 8, 2026 — announced full executive team (CEO Marc Levy, CFO Charles Ross, Chief Geologist David Flint) will attend Precious Metals Summit Beaver Creek September 22-25 for a full schedule of institutional 1-on-1 meetings. Same release: entered marketing consulting services agreement with Spark Newswire Inc. at US\$150,000/month active monthly budget, auto-renewing. [Source](#)

STORY HOOK

The \$150K/month Spark Newswire budget is unusually large for a junior — signals PRmediaNow-scale ambition on the awareness side. Beaver Creek runs this week; Q4 catalyst schedule is teed up right after.

SUGGESTED ANGLE

The \$150K/month Spark budget plus full-team Beaver Creek presence is a company operating at real scale on awareness, not testing the water. The Choquelimpie 'scale + grade + infrastructure' angle Marc is leading with in Colorado is a broadcast-ready storyline. Fifteen minutes to walk through what earned media adds on top of Spark?

4. Green Canada Uranium Corp. TSXV: GCUC SCORE 8 / 10

Uranium exploration (nuclear / clean energy) · Athabasca Basin, Saskatchewan (Marshall Project + North Millennium option)

INTENT SIGNAL

September 9, 2026 — commenced trading on TSXV as GCUC following completion of reverse takeover with Green Canada Corporation. Same week, mobilized drill to 100%-owned Marshall Project in the Athabasca Basin; drilling commenced by September 16 with two drill holes testing geophysical targets for unconformity-style uranium. [Source](#)

STORY HOOK

Fresh public-market listing + active drill program + unconformity-style Athabasca uranium during the AI-nuclear demand surge. Same setup as Cycle 01's Canadian Uranium, one cycle later, different property, cleaner catalyst window.

SUGGESTED ANGLE

GCUC started trading and put a drill in the ground the same week — every ingredient for a broadcast story is aligned. Unconformity-style Athabasca uranium during the AI-nuclear demand surge writes itself. Fifteen minutes to walk through what PRmediaNow can line up before the drill results hit?

5. Noram Lithium Corp. TSXV: NRM / OTCQB: NRVTF SCORE 7 / 10

Lithium (battery materials) · Nevada, USA (Zeus Lithium Project) — Canadian-listed

INTENT SIGNAL

September 3, 2026 — entered investor marketing services agreement with Emerging Growth LLC (dba TDM Financial) for a 6-month digital investor marketing campaign focused on both Canada and the United States. Total fee US\$40,000 (\$20,000 on execution, \$20,000 after month three). [Source](#)

STORY HOOK

US-asset lithium company hiring a US-focused digital marketing firm — signals intent to court American retail as the domestic-lithium narrative rebuilds. Broadcast media reaches a different pool than TDM's digital audience.

SUGGESTED ANGLE

Noram is going after US retail through TDM's digital channels — the earned-media layer above that lands the domestic-lithium supply story with a broadcast audience. Different pool, different arc. Fifteen minutes to see where PRmediaNow fits alongside the TDM campaign?

6. Skeleton Coast Uranium Corp. TSXV: SKEL SCORE 7 / 10

Uranium exploration (nuclear / clean energy) · Erongo Region, Namibia (5 Exclusive Prospecting Licenses)

INTENT SIGNAL

September 21, 2026 — announced \$5,000,000 non-brokered private placement (33,333,334 units at \$0.15/unit plus half-warrant at \$0.20 for 24 months). Proceeds fund continued Namibia exploration. Concessions are adjacent to or within 30km of Namibia's three producing uranium mines: Langer Heinrich, Rossing, and Husab. [Source](#)

STORY HOOK

Fresh \$5M raise + brownfield-adjacent uranium ground in Namibia during the current uranium surge. Namibia produces ~12% of global mined uranium — an underplayed jurisdiction story for North American media.

SUGGESTED ANGLE

Skeleton Coast just closed \$5M and sits next to three of the world's producing uranium mines — the 'adjacent to Rossing' story is one broadcast media has not covered. Uranium is having a moment; a fresh capital-plus-brownfield story finds airtime. Fifteen minutes to walk through?

Which of these you engage — and how it goes — is your call. When a lead moves forward, gets set aside, or comes back to life later, a quick note back sharpens the engine for the next cycle. No formal reply is required; the decision on whether to reach out sits with you.
